Frequently asked.
Simply answered.

Everything you need to know about getting started,
the platform, your data and our team.

Getting started

Who is Accelerator for? —

Anyone who makes marketing decisions and gets asked, "How do you know?" Marketers defending a budget, agencies building a pitch, publishers proving what their audience is worth. If your job is working out who to target, where to reach them, what will land and whether it's working, Accelerator is for you.

Platform capabilities

What does Accelerator actually do? —

It reads your market and recommends what to do next. Accelerator connects your audience data and answers the questions that shape a plan:

- Who is our real audience?
- What behaviours define them?
- Where should we reach them?
- How is that changing?

Then it turns the answers into a plan you can brief, launch and measure, all in one place.

How is AI being used? +

Where does your data come from? +

How accurate are the insights? +

How is this different from my existing tools? +

How does this work alongside my agency? +

Do I need to be technical to use it? +

Do I need a big first-party dataset? +

Will this fit into my existing workflow? +

Why build something like this now? +

Privacy & security

Is my data safe? —

Yes. By default, Accelerator is designed to operate without your customer or business data. Any reports, data or other information you choose to connect stay private to your organisation, behind access controls, on secure infrastructure and governed by the NZ Privacy Act 2020. We're building Accelerator for organisations that treat data as seriously as we do.

Do you use my data to train your models? +

Is Accelerator GDPR / NZ Privacy Act compliant? +

About Us

Who built this? —

Accelerator was built by a team of Kiwi agency people, marketers and engineers who were tired of the same problem: marketing decisions depend on data, but that data is usually scattered across too many systems to use properly. So we built something to remove the guesswork.

Where is Accelerator based? +

Why New Zealand? +

What's next for Accelerator? +
